

Type NSD Tipping Bin

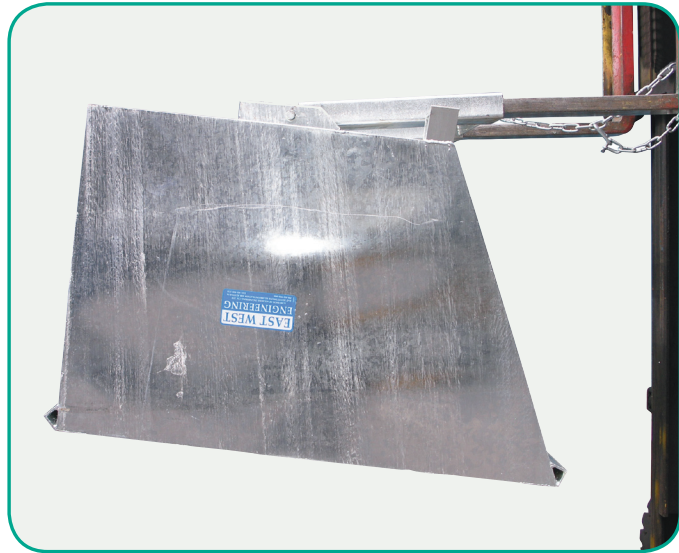

The NSD self dumping waste bins provide an economical solution to collecting and disposing of industrial waste. During transport, the forklift tines are positioned fully under the bin ensuring the forklifts full lifting capacity is utilised.

To empty the bin the operator places the front feet of the bin inside the edge of the bulk dumpster, then drive backwards until the tines clear the pivot point and then raise to allow the bin to tip forward. Available in either painted or galvanised finish.

- Safe Working Load: 1000 kg
- Fork Pocket Size: 165 mm x 65 mm
- Fork Pocket Centres:
 - NSD6: 381 mm
 - NSD9 – NSD18: 635 mm

Options Available:

- Crane Lugs
- Drain Valve & Strainer
- Cast Iron or Rubber Wheels

Type	Capacity (cu. m)	Length (mm)	Width (mm)	Height (mm)	Unit Weight (kg)
